

# Compressed Gas Solutions

## From Large to Small, We Do It All

Whether it is a large hospital system or a small family practice office, Compressed Gas Solutions is the only medical gas supplier capable of supplying and servicing all types of delivery systems; from a single emergency oxygen cylinder to bulk storage vessels, we can do it all. Certified and licensed, Compressed Gas Solutions is locally owned and operated, serving the five counties surrounding the greater Orlando area, and gaining the trust of our customers for over 30 years. Our ability to move rapidly is only exceeded by our ease of doing business.

## Quality You Expect, Service You Deserve

Compressed Gas Solutions shares the same standards for medical care your patients have come to expect and deserve. It is for this reason that Compressed Gas Solutions supplies medical and laboratory gases that are of the highest purity and quality available.

### Medical Grade Gases:

- Oxygen, USP (US Pharmacopia)
- Nitrous Oxide
- Liquid Oxygen, USP
- Liquid Nitrogen, NF
- Helium
- Carbon Dioxide
- Nitrogen, NF (National Formulary)
- Lung Diffusion and Blood Gas Mixtures
- Respiratory and Device Mixtures

While other companies talk about customer service, Compressed Gas Solutions' 24-48 hour response time exemplifies customer service. This delivery policy is convenient for you as opposed to relying on a weekly route system that is convenient for your supplier. "We understand that running out of a product is not an option."

## Specialized Services and Products:

Our MicroBulk Delivery System gives you all the benefits of bulk gas systems in a flexible compact package. Storage can be inside or out, deliveries can be made in areas too small for large delivery vehicles and telemetry allows us to monitor usage and schedule deliveries for uninterrupted service.

Our Liquid Nitrogen "Keep-Full" Service is designed to keep your laboratory storage dewar conveniently and consistently supplied with liquid nitrogen at one monthly price. Request any frequency of service you desire (monthly, weekly, bi-weekly, etc.) and receive one monthly invoice based on your frequency of service. If your liquid nitrogen usage is inconsistent, we offer a call-in service, and will fill your laboratory storage container on site within 48 hours.

Integrated Regulator Cylinder System "O2GO All-in-One" is an Emergency Oxygen Unit that is simple and easy to use. With no separate components to assemble (eliminating leak problems), these cylinders arrive operational with an integrated regulator, easy to read continuous contents gauge and incorporated carrying handle.

## Gas Isn't All We Do

Besides medical and laboratory gases, Compressed Gas Solutions offers Custom Medical Compressed Gas Piping Equipment and Installation. A custom designed centralized medical gas system will reduce cylinder handling, improve time utilization and assure safety. Whether you are building a new facility or remodeling an existing one, we will work closely with you to minimize interruption. When it comes to new or existing equipment, Compressed Gas Solutions can even provide custom length hoses, install wall outlets and attach quick disconnects to enhance efficiency.

For those practices that have two or more medical gas cylinders, avoid the frustration of product supply run-outs by enlisting Compressed Gas Solutions to install an Automatic Changeover Manifold System. This will assure an uninterrupted gas supply and eliminate concerns of a depleting product.

## Other Products & Services:

- Cryogenic Laboratory Storage Containers & Accessories
- Portable Oxygen O2GO (All-in-One Regulator/Cylinder Unit)
- Custom Manifolds and Piping Systems
- Custom Hoses/Quick Disconnects/Wall Outlets
- Regulators and Flow Meters
- Regulator Re-qualifying and Rebuilding
- Bulk Solutions for Medical Applications
- Telemetry Monitoring Systems

## "Gas is our middle name"
